THE ETH MODEL OF QUANTUM MEASUREMENT

Tuesday, October 6, 2026
3:00 P.M. in Massry B008

ABSTRACT. I will present the progress we made on quantum measurement. Due to the importance and discrepancy between the theory and experimental facts, quantum measurement is considered the "last pillar of quantum mechanics." We considered this problem in the ETH (event, tree and history) framework. Joint work with Juerg Froehlich and Alessandro Pizzo.
